

Ehrman Industries, LLC

Plate Saver™

Thank you for purchasing a Plate Saver™. Ehrman Industries is committed to producing quality, innovative products.

Our innovative, patent pending, Plate Saver lighted license plate mounting bracket, provides versatility by mounting a license plate above the standard trailer tail light or mounting on a trailer's rear gate.

Mounting Instructions:

When mounting to a standard trailer tail light, simply slide the Plate Saver over the universal mounting bolts of the existing tail light. Slide the ground loop terminal over one of the universal tail light mounting bolts, then secure the Plate Saver™, the ground loop terminal to the tail light and trailer using the tail light mounting nuts. Follow the instructions included for the weather resistant tap-splice connector on reverse side.

In order to mount a Plate Saver to the rear gate of the trailer, the Plate Saver™ Accessory Kit is required. The Plate Saver Accessory Kit is sold separately and contains the necessary hardware.
